Dr James Smith
Sydney Aged Care

Re: Jane Doe | DOB 1 November 1935 | JD-19351101
Sydney Aged Care

Dear Dr Smith,

Assessment: atrial fibrillation

Thank you for referring Jane for assessment. Atrial fibrillation is documented in the assessment record. Hypertension and knee osteoarthritis are also recorded. The original dates of onset of those conditions are not established.

The recommendation is for apixaban 5 mg twice daily and metoprolol 25 mg twice daily, with prescribing and reconciliation by the usual GP. This is the recommendation at the time of this assessment; a later issued prescription is a separate record.

No additional examination measurements, ECG trace or echocardiogram findings accompany this source. They have not been added to this letter.

Recommendations

1. Please review the medication record and document the issued directions in the GP chart.

2. Reassess symptoms and treatment tolerance at subsequent medical review.

Yours sincerely,
Dr Matthew Thompson
Cardiologist
